SUMMARY

I'm a software engineer with 6+ years of experience, happiest somewhere between code, product decisions and a slightly overambitious roadmap. I've worked hands-on with founders, built and led an engineering team, and taken products from "we have an idea" to something people can actually use.

Frontend is where I'm strongest, but I enjoy working across the stack and thinking about product and architecture end-to-end. I'm happy to get my hands dirty on the backend when needed. Give me an early-stage product, a small team and a problem without a Jira ticket yet - that's usually where I do my best work.

I'm also studying psychology, which turns out to be surprisingly useful in tech - especially in startups :)

SKILLS

ENGINEERING

TypeScript	Angular	Vue.js	Flutter	React (basics)	RxJS	NgRx	Software Architecture	
System Design	Micro Frontends	API Integration		REST APIs	CI/CD	Docker	Git	Sentry
Observability & Error Monitoring		Unit & E2E Testing		Jest	Web Accessibility (WCAG)		Storybook	

PRODUCT & OWNERSHIP

Product Strategy & Execution		Product Discovery		0 to 1 Product Development		Stakeholder Management	
Team Leadership		Recruitment & Onboarding		Requirements Analysis		Technical Roadmapping	
Cross-functional Delivery		User Research & UX Thinking					

AI-ASSISTED ENGINEERING

Claude Code	GitHub Copilot	Agentic Development Workflows		Structured Prompting	
Document-Grounded Reasoning		Context Engineering	AI-assisted Code Review		Architecture Analysis
Refactoring					

EXPERIENCE

Software Engineer (Frontend)

JAMF Contractor (B2B contract)

- 📅 02/2025 - Present

Tech stack: Angular 19+, TypeScript, RxJS, NgRx, AngularJS, JSP, React (basics), Java, Jest, Sentry, REST APIs, Micro Frontends, CI/CD, Claude Code

 - Migrate legacy enterprise applications from AngularJS and JSP to Angular 19+, modernising architecture and incrementally replacing a large legacy codebase.
 - Collaborate across frontend, backend and platform teams to diagnose and resolve integration issues spanning micro-frontends, APIs, authorization and gateway layers.
 - Design and maintain micro-frontend solutions supporting independent delivery across multiple teams.
 - Implement and enforce accessibility standards (WCAG) across enterprise web applications used by international customers
 - Build and maintain unit and end-to-end test suites, improving coverage and release confidence.
 - Apply structured AI-assisted development workflows with Claude Code, using document-grounded prompting, iterative critique and codebase context to improve technical decisions, code quality and delivery speed.

EXPERIENCE

Founding Engineer

SpineTime

08/2025 - 08/2026

Tech stack: Vue.js, TypeScript, Flutter, REST APIs, Figma, CI/CD, Git, Claude Code

- Rebuilt the product frontend in Vue (30+ screens, delivered to release readiness in 12 months), owning architecture and technical decisions end to end.
- Identified critical gaps in the product's technical and methodological foundations, rebuilt its core approach, and developed the mathematical method underpinning its key functionality.
- Built and led a team of 4 (3 software engineers, 1 QA) - recruited and onboarded every member.
- Worked directly with founders and business stakeholders to shape product priorities, assess trade-offs and turn ideas into delivery plans.
- Drove technical preparation for MDR Class IIa certification: technical documentation, testing strategy, cybersecurity considerations and user-facing materials, including usability validation with 50 participants.
- Role concluded as the project reached the end of its funded phase.

Frontend Developer

Better Collective

01/2023 - 01/2025

Tech stack: Stencil JS, Angular 15, TypeScript, Figma, responsive UI, container queries, unit testing

- Built reusable sports betting web components in Stencil JS, shared across multiple products and frameworks.
- Delivered multilingual components supporting 16 languages, with fully responsive layouts using container queries.
- Developed and maintained an Angular 15 admin panel for content and data management.
- Designed UI/UX in Figma, working directly with business stakeholders on component behaviour and usability.
- Maintained unit test coverage and kept technical documentation and user guides current.

Junior Frontend Developer

Better Collective

08/2021 - 12/2022

Tech stack: Angular, TypeScript, SPA development, refactoring

- Developed and maintained Angular single-page applications, refactoring legacy code and improving stability and maintainability.
- Worked directly with business stakeholders and end users to translate requirements into working features.

Junior .NET Developer

Primaris

07/2018 - 12/2019

Tech stack: ASP.NET MVC - C# - CSS - Basics of SQL

- Contributed to application modelling, design and implementation using ASP.NET MVC and C#.
- Joined the project at an early stage and contributed to technical decisions, including the choice of technology stack.

EDUCATION

IT Engineer

Warsaw University of Technology

02/2018 - 06/2021 Department of Electronics and Information Technology, the Faculty of Informatics

Psychology

SWPS University

10/2024 - Present Faculty of Psychology in Warsaw
